I am a frontend developer with a strong interest in building clean, accessible, and user-friendly web experiences. I enjoy turning ideas and designs into functional interfaces while paying close attention to structure, performance, and usability.

My background includes working with HTML, CSS, and JavaScript to create responsive, accessible websites and small web applications. I value clean code, semantic markup, and continuous improvement, and I actively revisit and refine previous projects based on feedback.

I am especially interested in frontend development because it combines logic, creativity, and user experience. I enjoy solving problems, learning new technologies, and improving my skills through hands-on projects. I believe that good interfaces should not only work correctly, but also feel intuitive and enjoyable to use.

I am currently looking for opportunities where I can grow as a frontend developer, contribute to real projects, and learn from more experienced teammates. This portfolio represents my current skills, mindset, and approach to development, and I am motivated to keep improving with every project.
